Should I learn AngularJS 2.x, or start with 1.x?

Mehul Mohan, let myHome = () => location.href = '//codedamn.com';
Answered Jun 16

In my opinion, AngularJS is easier to get started with as compared to Angular 2/4. This is primarily because in AngularJS, you've to just include a script and you can get started.

However for Angular 2/4, if you're not going to use Angular CLI, then it'll take you some time to setup your development environment. This might be overwhelming for people who never setup environments including things like transpilers, webpack, etc.

But once your dev environment is setup correctly, it just boils down to how much you practice and understand stuff. So in a nutshell, if you're comfortable, or atleast a bit familiar with TypeScript, ES6, etc. I think Angular 2/4 would be a great choice over AngularJS because apparently it is the future of Angular.

What technologies should I know to build a desktop app in Electron?

Mehul Mohan, let myHome = () => location.href = '//codedamn.com';
Answered Jun 10

Electron requires you to know about NodeJS (and JavaScript, obviously). But you do not need to be master to begin. I think learning while building things is the best way to actually retain what you're doing.

Here's a web series to get you started with electron framework: Electron Tutorials - YouTube

What are some educational WhatsApp hacks?

Mehul Mohan, Little did I know I know
Answered Mar 11

Hack? I've got one!

The best way to ask for apology is to apologize every 30 minutes! Isn't that cool? But who is here to send a message every 30 minutes? Now you're understanding the hack. ;)

So here's this app: Scheduler For WhatsApp - Android Apps on Google Play . You have to configure it for the first time with your laptop/computer (which is a little pain), but once done, you can configure it to send, or rather schedule messages on whatsapp to any of your contact/group on your specified time.

Like wishing somebody on their birthday exact at 12 when you're busy watching movie on your phone! Yeah, it works that way!

For the bad guys/girls, it comes with a SPAM mode to beat the hell out of your enemy by flooding the other person with messages! Handle with care!

Spoiler: I'm the developer.

## When did you create your first app for android?

Mehul Mohan, Android is super duper!
Answered Nov 17, 2016

I created my first app as a game 'Bantumi 3310' around a couple of months back, which was earlier available on older models like Nokia 3310 and some more models.

Rules are simple and mentioned in the help section of the game. You might even just go ahead and play to understand what is going on.

Here's the link: Bantumi 3310 - Android Apps on Google Play

Add a comment…   Recommended   All

What is the coolest thing you have ever created alone as a programmer?

Mehul Mohan, Little did I know I know
Updated Feb 17

Update: I think Scheduler For WhatsApp - Android Apps on Google Play   is a "cooler" thing than this :D

I'm a class 12th student so I don't get a lot of time for my programming activities, but recently, I created a media server for raspberry pi which allows you to play videos from YouTube and from your phone directly on your TV!

This setup works on your home WiFi (LAN) i.e. your phone and raspberry must be connected to same WiFi network in your home.

You just need to have a raspberry (any model). Here are the steps to setup raspberry pi for this media server:

- Connect your raspberry to your TV with HDMI cable.

- Follow the below instructions using a connected keyboard to raspberry or with SSH.

- Clone this repository mehulmpt/WiPi   on your raspberry by writing:

```
1  git clone https://github.com/mehulmpt/WiPi
```
```
1   chmod +755 boot.sh
```

- Run the boot file:

```
1   ./boot.sh
```

- Now let it complete. Once it's done, it'll show you "Starting WiPi. Enjoy!".

Setting Android

- Make sure your raspberry is connected to TV. If everything went smooth, you should start seeing notifications on your TV screen something like this:

- Okay, 50% done. Now download this app: WiPi - Android Apps on Google

- It'll ask for an IP address. Enter the IP displayed on screen earlier.

- Hit OK.

- Congrats! You've successfully configured Pi with your phone.

- Now you can stream youtube videos/media from your phone via "Share" on Android. Example: Go to YouTube -> Video -> Click Share -> Select WiPi.

- For streaming media of your gallery (like a movie or something), go to Gallery -> Select video -> Share -> WiPi.

- Controls embedded in android app.

- Sit back and enjoy!

How do I determine this?

Mehul Mohan, Little did I know I know
Answered Oct 14, 2016

Here's my take:

If D detects a program P as virus if P tries to execute malicious system commands, then D would not be able to detect CV as a virus because that program makes other exes infected (assuming silently) and thus would only detect those infected exes as virus.

However, if D detects a program P as virus by scanning its code and what possible executable actions can be taken by its code, then D would surely detect CV as a virus because there has to be some sort of virus code in CV as it infects and puts into other exe files.

Here obviously I'm assuming that there is no involvement of internet to download source code, etc. otherwise the second scenario can be defeated as well.

Mehul Mohan, Suggest me a bio for Quora
Answered Oct 14, 2016

I've earlier answered this question: Mehul Mohan's answer to Can you download all Quora answers from one person? and I think this is what you might need.

Though I didn't try my script on a profile with this many answers but this should probably work well. Just start the script and leave it for few minutes (the exact time depends how fast your PC processes instructions) and you'd be presented with a new webpage with all the answers. You can then save it in word or wherever you like.

Can JavaScript works in correlation with C/C++ Programming Languages to make the website more responsive and interactive?

Mehul Mohan, Little did I know I know
Answered Oct 11, 2016

JavaScript is THE frontend scripting language. C++ is something which runs close to your machine hardware. You can program softwares, games, even GUI in C++.

wrong could blow you up. So make sure you know what you're doing (or rather go with some already coded servers in C++)

Google itself uses C++ at server side for some speed critical operations.

How long does it take to learn how to develop an Android app?

Mehul Mohan, Web developer
Answered Oct 7, 2016

It really depends how much you're giving in. I'm a school-going guy so could eventually take out only 2–3 hours a day for programming and stuff. But what's important is that you move fast. Don't just stick on one thing and deeply study it, it won't give you any benefit. Don't understand something? Google it, ask on stackoverflow, ask somebody professional.

Also, don't jump into any sort of frameworks at all before you are good with the native SDK implementation. There are some attractive game engines which you might think would make your development process easier, but no. They'd make it easier for the one who already knows a lot about android in the first place.

I've developed around 4–5 apps but mostly for my personal use (like youtube video downloader, facebook video downloader, etc.) I've created another app

Good luck!

What happens if a very slow moving supermassive object (earth size) hits you? Is it really worse than being hit by a car at a high speed?

Mehul Mohan, Learning on my own

collision (which is likely to happen).

So, assuming that you are initially at rest and supermassive body hits you slowly (like 2–3 m/s), and your mass is `m` and mass of supermassive body is `M`, then:

Mu = (M+m)v where u and v would be final velocities. Well, since you are well below the mass of supermassive object, we can safely assume v ~ u. So, you'd just start moving with almost same velocity as of the supermassive object.

However, if you want to be a little bit more creative, think of a perfectly elastic collision. For this, velocity of separation (finally) = velocity of approach (initially). So you can think that you'll be ripped apart by that much change of momentum.

Note: I've ignored gravity and all other real things which would actually happen in such an event. This is a complete hypothetical answer. So don't jump from window :)

Could someone explain to me how HTML, CSS, JavaScript, PHP, and MySQL work together? Can they somehow be intertwined to make something on a grander scale?

Mehul Mohan, Web developer
Answered May 24, 2016

Now lets say, X sees a rod, but doesn't know it's hot. X touches the rod, and boom!

The JavaScript (receptors) of X immediately sends a signal to PHP (brain) of X regarding what happened. PHP then responds back to frontend (the JavaScript) and tells JavaScript to remove hand from the rod.

PHP also saves this occurrence in MySQL (your storage area) so in future, X does not touch hot iron rod.

In short:

- HTML/CSS - How website looks

- JavaScript - How website interacts

- PHP - How backend interacts (Can interact with frontend (user) with JavaScript calls, etc.)

- MySQL - Place to store data like CC details, login info, etc.

That's the most ridiculously simplest connection I was able to make. In real world, obviously JavaScript and PHP run on different machines (one on user end, other on server end), so, this analogy fails a bit. Sorry geeks!

There are a lot of ways to do this thing. You can scrape the information from profile page, you could even check how their API is loading their answered questions when you scroll down on their profile page. But the simplest one I can think about goes like this:

- Go to the profile page of the user, lets say its mine: Mehul Mohan

- Assuming that you're using a modern browser, right click on white screen area -> Inspect Element (or Inspector, or something like that) -> Console tab.

- In the JavaScript console, write this line:

```
1   var interval = setInterval(function() {
2     window.scrollTo(0,document.body.scrollHeight);
3   }, 200);
```

- By now, you must have noticed that your page continuously goes down whenever answers are loaded.

- Let this happen till the last answer (when no more content loads).

- When all answers are loaded, run this code in console:
  ```
  clearInterval(interval);
  ```

- Okay. Part 1 done.

Now though all answers are loaded, but still answers are partial. You'll notice that there is a more link which would then lead you to full answer. Pretty annoying if done manually, but hey! ;)

- Inside console, write:

Hurray! We're almost done. Now, in console, write:

```
1  var questions = [];
2  var answers = [];
3  var i = 0;
4  [...document.querySelectorAll('div.pagedlist_item')].map( e => {
5  answers[i] = e.querySelector('div.ExpandedAnswer').innerText;
6  questions[i++] = e.querySelector('span.question_text').innerText;
7
8  });
9  // You have access to questions and answers now.
10 // questions[0] → answers[0] and so on..
11 var bigStr = "";
12 for(i=0;i<answers.length;i++) {
13 bigStr += "<h2>"+questions[i]+"</h2>"+"<p>"+answers[i]+"</p><br><br>";
14 }
15 var w = window.open('', '', 'width=800,height=800,resizeable,scrollbars');
```
Wow! Here we go! :D

What are the best ways to promote your Chrome Extension especially when you don't have any website?

Usually, you don't have to. Google would do the job for you. Google often shows recommended extensions or similar extensions when a user installs a particular extension. Once your extension is launched, you just need to get a few installations and do stuff like setting up description, keywords, etc.

If you really want to have quick results, you can create a video demonstrating how to use your extension and why use it. Publish it on YouTube. Promote it via social media or YouTube video ads, but I think investing money in your extension won't be a great idea unless your extension offers some in-extension purchases.

Good luck!

How can I decimate javascript?

Mehul Mohan, Web developer
Answered May 13, 2016

Yes, JavaScript is a really bad language.

Yes, all those people at Google who developed Chromium V8 JS engine because they're stupid.

Yes, its lame that JavaScript allows you to develop awesome games on browser.

Yes, JavaScript is bad because it allows you to use WebGL for 3D games and animation.

Yes, developers are crazy because they're supporting it from 20 years (and still do).

Yes, it is JavaScript's fault that people code bad JS. JavaScript should probably be an AI language which should probably code itself automatically.

Yes, JavaScript should be decimated.

Why is a dimensionally incorrect equation necessarily a wrong physical equation?

Mehul Mohan, Science is reality.
Answered Mar 31, 2016

When you equate 2 things, that literally means that you can make use of either of the things at some place. For instance,

2 KG = 2000 Grams

Now, wherever you write 2 kg, you could actually replace it by 2000 gm. A dimensionally incorrect equation is surely incorrect because you are not theoretically equating same quantities. You cannot make use of "time" instead of "mass" or "length", ever.

How much can I offer to a programmer for developing a new browser?

Mehul Mohan, Little did I know I know
Answered Mar 31, 2016

Creating a simple browser isn't very difficult task. You just have to tell the program how to deal with HTTP protocol. But this browser would be extremely simple and would just return the source code of website.

Things would get really messy when you try to develop a custom JavaScript engine, toolbars, GUI, etc. because for that, you'll need a lot of code, and admit it when I say, a LOT OF CODE.

So probably, no "single" programmer would take up creating a browser competitive to Chrome or Firefox, or IE, or whatever.

JS ok on Ionic?

Mehul Mohan, Angular is love. Angular is life.
Answered Mar 31, 2016

Ionic is the simplest framework I've ever encountered to make applications for mobile devices. Using angular with ionic is **highly** recommended, not only because Ionic is built on angular, but because angular is also becoming one of the most used web framework.

AngularJS is really simple and easy to understand if you don't rush it out. You can create an android application in less than half an hour with the help of ionic + angularJS if you know just the basics. You don't need to know Ionic at all! Infact Ionic is a framework of frameworks, so you probably need to learn those sub-frameworks.

Most important of those is Angular. I'd really recommend you to spend some time with AngularJS and then move to Ionic. Here are a bunch of AngularJS tutorials you'd like to have: AngularJS Tutorials

These would help you to gain enough information you need for Ionic (actually, a lot more than enough)

Then you can move to Ionic framework tutorials: Ionic Framework Tutorials

And if you are really desperate to see Ionic in action, here's a simple news reader application:

Good luck!

Mehul Mohan, Web developer
Answered Mar 15, 2016

This (Javascript Tutorials   ) is a collection of around 50+ tutorials, if you want to kickstart with JavaScript. It includes everything you need to learn in JavaScript, from Hello World to the prototypal model on which JavaScript works, to regular expression, to hoisting and all that cool stuff.

I would, however, highly recommend you to not just watch tutorials, but also follow along with them. Ask for any problems you face, and try to implement it in any project you can think of.

After JavaScript, you should probably go for jQuery as it makes whatever you've learned so far, much easier. But always go for JavaScript first, otherwise, you'll miss the basics of everything built on JavaScript.

Good luck!

Is angular 2.0 faster than 1.x?

Mehul Mohan, Angular is love. Angular is life.
Answered Feb 18, 2016

'Fast' is an ambiguous term here. Angular 2 is a beast. It is obviously faster in execution and better than 1.x. It supports and brings so many things which Angular 1.x doesn't have. Brings in support for ES6, modules, classes. You can even run it on server!

Angular 2 is not limited to DOM only. It is fast, and it is the future! But you might consider learning Angular 1.x a bit before hopping into Angular 2?

Answered Feb 15, 2016

Originally Answered: Should I know angularjs 1.x to learn angularjs 2.0? Asking because I hear they have changed all the core components in 2.0.

No. Its not really that important. But Angular 2 is still in beta and would take some time to be common among developers. I think that it'd be a great programming language because of its versatility and strong coding team behind it. They're backed by Google, Microsoft, etc. like giants.

Meanwhile, if you ever want to learn Angular, or just the basics, you might consider this: AngularJS Tutorials

What books are must and best for learning HTML, CSS, JavaScript from the very scratch?

Mehul Mohan, Web developer
Answered Feb 2, 2016

No book. Frankly speaking, HTML isn't *that* thing you'd actually need to look a book for. HTML is the simplest language which you can actually learn and apply on such a wide scale (i.e. web). Extremely easy to start learning, create a file, just write "Hello World" in that, and save it as .html file. BOOM. Your first HTML page.

However, obviously, you wouldn't like to end up as a messy designer who doesn't know, technically anything *deep* about HTML and CSS. And since you mention JavaScript, I believe you'd be interested in learning the "frontend" programming language i.e. the end where your users (visitors) are.

With a little dedication and concentration, you don't need a single book to learn those. You just need to spend as much time as you can with these languages. And obviously, just gazing at tutorials and videos (links below) would eventually be lost somewhere in your mind. So, the best practice would be to learn a bit, and start a project on it. No matter how small it is, just make sure you are trying to do something you can't do. That way, you'll do research on various sources as well (like googling, stackoverflow, etc.) which would reveal new things in front of you.

Lastly saying, don't give up. There would come a moment where you'll just say

What are some best resources and practices to learn angular js?

Mehul Mohan, Angular is love. Angular is life.
Answered Feb 2, 2016

Get yourself a laptop, a stable internet connection, a text editor, and a few hours.
Find a cozy corner and head up to AngularJS Tutorial playlist: AngularJS
Tutorials

Follow up with me and code everything I write, yourself, simultaneously with me.
That way, when you'll write and code, you'll learn way more than just gazing at
videos. Gazing would make you yawn and videos boring. So go ahead and start
coding!

Here's a textual guide as well, written by me, in the most simplest language ever,

Good luck!

Can I learn Angular JS instead of PHP? And use it as backed for my every website?

Mehul Mohan, Little did I know I know
Answered Feb 1, 2016

No. AngularJS is meant for client side. You need to learn a server side language for handling operations at server. Just like you can't handle a click even with PHP (you need JavaScript), similarly, many events like HTTP Header redirect, etc. can't be done with Angular (or JavaScript).

However, if you'd really like to keep it the 'javascript' way, you can go with Node.js framework. That is, running on Javascript engine and is backend, as well.

Here's a resource to learn AngularJS, if you want:

If $2^x 3^y 6^z = 3^x 6^y 2^z = 6^x 2^y 3^z = 10$, then what is the value of x?

Mehul Mohan, Science is reality.
Answered Jan 10, 2016

Clearly from the expression,

x = y = z.

Therefore $2^x 3^y 6^z = (2.3.6)^x$

$36^x = 10$

Take log on both sides (base 10)

$x log 36 = 1$
$x = 1/log 36$

Hence x ~ 0.6425486044

What is the laziest thing you have done in your life?

Mehul Mohan, let myHome = () => location.href = '//codedamn.com';
Answered Jan 7, 2016

I wanted to wake up early in morning so I downloaded an app which required me to solve 4-5 mathematics sums before I can switch off the alarm.

Eventually, one day I was in no mood to wake up. The alarm won't stop ringing. So what I did is I held the power button and switched off the phone.

RIP app. And since my subconscious mind knows how to handle this alarm, I would always switch off my phone no matter how hard I try not to.

What is the next element in this series 2,6,30,210,2310,? And How?

Mehul Mohan, let myHome = () => location.href = '//codedamn.com';
Answered Jan 5, 2016

What appears to me is that this series is in the form of

p(n) * last_num

where p(n) is the nth prime number.

T(3) : 5 * 6 = 30

T(4) : 7 * 30 = 210

T(5) : 11 * 210 = 2310

T(6) : 13 * 2310 = 30030

....

And so on....

So for the nth term, you need to continuously work starting from T(1) and then finding the next prime and then multiplying it with last term.

Why is 1^∞ an indeterminate form?

Mehul Mohan, let myHome = () => location.href = '//codedamn.com';
Updated Jul 31, 2016

Originally Answered: Why does 1 to the power infinity is undeterminate form? Explain with full explanation

Let's say that $1^\infty = 1$.

Take log on both sides

It gives you:

Another reason you can think about is that ∞ is not a number. It is a concept.

However, if you try to do it with limits, like:

$$\lim_{n \to \infty} 1^n$$

Then it is surely 1. (n is very close to ∞, however, finite)

How can I create a file which can only be opened after a certain time?

Mehul Mohan, Little did I know I know
Answered Dec 3, 2015

If I had to do this, I'd do it like this.

1. Select a time far in future. Select everything: year, month, date, time.
2. Go very deep in time. I mean select an hour, minute, second, millisecond…
upto where your hardware would support. The deeper, the better.

Let's say you chose 22 October 2057 9:18:10:975 as the time.

3. Note down that time. Encrypt that time using any of the one way encryption
mechanisms available today. Let's say you select md5.

4. Now you have to select an encryption key. Select any time before or after the
time above. Let's say you selected 1 year and 10 seconds after that time. So your
next time is:

22 October 2058 9:18:20:975

5. md5 this time as well. Now you have 2 strings which are undecryptable*. The
first one is the time when you want your file to unlock.

check. Once the md5 of current time matches the md5 you have hard-coded there, you can take a jump and md5 1 year and 10 second date at that time. And then decipher the file.

Happy future hunting!

Actually my birthday falls on 22 October. ;)

Does a perfect circle exist in the real world?

Mehul Mohan, let myHome = () => location.href = '//codedamn.com';
Answered Nov 26, 2015

No. For perfect circle to exist, you need perfect value of pi, infinite number of decimals. Real world has physical limits lowest being the Planck's length. So you cannot draw a perfect circle ever. I can zoom any circle's circumference enough in real world that a line segment appears. Theoretically you'll never end with a line segment.

Is the direction of resultant vector an observed fact of physics knowledge?

Mehul Mohan, Science is reality.
Answered Nov 18, 2015

Yes it is observable! If you want to observe resultant vector, try this simple experiment.

Get a toy car and go to gym. On a slow but running treadmill, spring the car so the wheels move. Leave the car in perpendicular direction to the direction of treadmill. What you'll see is that car, instead of going straight (which it would've without treadmill) it goes in a slant path.

Here, the velocity vector of car is perpendicular to velocity vector of treadmill. The velocity of car you at you actually see from top (the slant one) is the resultant of the two.

Mehul Mohan, Science is reality.
Answered Nov 18, 2015

Mathematically

500 + 250 + 125 ………. upto infinity = 1000

$$\frac{500}{1-0.5} = 1000$$

So theoretically, you'll never reach finish line (mathematically), even if you started from big bang and tried all the way to end of universe. (though you might end up number like 999.9999999999994)

Physically

Look, mathematics has no size limits, this is the reason we can go to infinity. But physically, once you get to distances like 10^-10 or even lower, it doesn't even make sense to talk about covering that distance. A proton has a size of 10^-15, how do you think you, a multi-billion atom container, can cover distance less than that? It doesn't just make sense in real world.

So, actually when you measure 500 m covered in real life, you can NEVER be 100% away from your starting point.

Accuracy is an illusion, my friend.

If ads are so important, why doesn't YouTube add it into the videos so that ad-block cannot block?

Mehul Mohan, Experimenting with YouTube...
Answered Nov 3, 2015

Because if YouTube does so and some advertiser withdrew it's contract with YouTube then unwillingly ads on the videos would display the advertisements of someone who is no longer paying YouTube for that.

Moreover, YouTube won't be able to track ad metrics as strongly as it is doing right now.

Originally Answered: What are Tachyons and how are they detected?

Tachyons are the particles we consider to travel faster than light and **because of this,** they have imaginary mass. Why? Because of this formula:

$$m = \frac{m_0}{\sqrt{1 - v^2/c^2}}$$

Now as you can see, if v^2 > c^2, then we have imaginary inertial mass. That also means that tachyons cannot travel slower than speed of light.

So far, we haven't detected any, so we can't say if they even exists. But theoretically, they do.

Can you bend spacetime?

Mehul Mohan, Learning on my own...
Answered Oct 16, 2015

Yes I am bending it. Einstein's theory of relativity suggests that massive objects bend space-time fabric. We are not very massive but still every object has mass. So I guess while nearly insignificant, every object creates its own gravitational field and thus bend space-time fabric, somehow.

A body covers 12 m in 2nd second and 20m in 4th second. How much distance will it cover in 4 seconds after the 5th second?

Mehul Mohan, Science is reality.
Answered Oct 9, 2015

Given that the motion is in 1 Dimension and the body doesn't change it's direction (i.e. velocity is in the direction of acceleration), we have:

$$s = u + a(2t-1)/2$$

and

20 = u + a(2*4 - 1)/2

20 = u + 7a/2

=> 2u + 7a = 40

From 1 and 2:

a = 4

u = 6

Now, distance covered in 4s after 5th second = Distance covered in 9 seconds - distance covered in 5 seconds

= 6*9 + 1/2 * 4 * 9 * 9 - (6 * 5 + 1/2 * 4 * 5 * 5)

= 54 + 162 - (30 + 50)

= 136 m

Hypothetically what would happen if I jumped from a building 100 feet high while standing on a table and then jump upon the table just before hitting the ground?

Mehul Mohan, Science is reality.
Answered Oct 9, 2015

Well, no. Considering you and table as a single system, the velocity acquired by the table and you is same falling from 100 feet. At the very last instant, when you separate from the table, your velocity is not 0. You are still moving down with same velocity with which table was moving down. The difference is that you decreased your velocity a little bit by jumping up and increased the velocity of table a little bit by pushing it down (Newton's 3rd law). So when you'll hit the ground with that velocity, you'll probably would not be in a state of reading this answer on quora.

I am looking for an opportunity to earn a good amount from the Internet. How can I earn almost $1000 online per month?

🔗 http://csl.ink/mjm

Mehul Mohan, let myHome = () => location.href = '//codedamn.com';
Answered Sep 22, 2015

Avoid joining scam sites in order to earn! These sites would always think about their profit first, then their profit, then their profit, and finally yours.

To really make money online as an individual, you have some legit methods to make a grand per month:

- Freelancing
- Blogging
- Video blogging
- Affiliate Marketing
etc.

Freelancing

In freelancing, you work. Online. Just like you do in offline work. You can do anything you like. Like graphic designing (logo creation), programming, voice overs, etc.

Here's an article to kickstart freelancing with a very popular site: Fiverr -

How To Start Earning More With Fiverr?

Can earn while sleeping: NO

Blogging

Blogging is a way in which you create an online website and then publish your ideas, your experience and knowledge. You share it with world. As a result, people visit your site and leave their suggestions, comments, etc. More the visits your blog receive, more the potential your blog has to earn. You can then monetize your blog with ad networks to earn from it!

Estimated Earnings: 1000-2000$ per month.
Estimated Time to Reach This Point: 1-2 Years
Can earn while sleeping: YES

Video Blogging

Video blogging, just like blogging is a way in which you share your knowledge, but in videos. Create videos and publish them on any platform like vimeo, YouTube, etc. and monetize it. You can not only earn from this, but also create a strong readership (viewership, rather) and subscriptions.

Here's an article to kickstart your YouTube channel!

7 Killer Tips To Start A Great YouTube Channel!

Estimated Earnings: 1000-2000$ per month
Estimated Time to Reach This Point - 11 - 20 months
Can earn while sleeping: YES

Affiliate Marketing

In affiliate marketing, you make people register/purchase products of a particular company (like hostgator) and in return you get paid. For example, become affiliate of any hosting company and get sales to them.

For example, you can be a reseller hosting affiliate of hostgator and make huge amounts of money per sale.

Estimated Earnings: Depends on sales. Usually $1000+ for 20+ sales
Estimated Time to Reach This Point: Instant if you have a good client list in your hand
Can earn while sleeping: YES, if you can do like forum posting and promotion.

There are many other ways as well. But I explained the ones I remember which would allow you to make 1000$+ a month.

Remember, it requires time and dedication to reach this milestone but after that, you'll have bucks flowing all the time!

Can I earn money on YouTube without creating content?

Mehul Mohan, Experimenting with YouTube...

your video would be removed, your account may also be banned. I know this because I've done this (3 years back). In that case, YouTube would warn you 2 times about copyright violation and then would ban your account!

So the best way to make money from YouTube is to create your own content. Anything you like! Your homecam or your screencasts, anything which you consider would be useful to world would be eligible for monetization. But not pirate content. Sorry.

How can you earn 25000 rs from blog?

Mehul Mohan, let myHome = () => location.href = '//codedamn.com';
Answered Sep 22, 2015

Easy to say, hard to achieve (requires time and dedication).

With blogging (I assume long term blogging), you won't just earn 25K once, but maybe like every month. But for that you've to:

1. Write awesome content.
2. Promote it like hell!
3. Take care of SEO.
4. Be regular with your awesome content.
5. Check for your content piracy and get it removed from sites (if it is copied by someone).
6. Finally when you have a decent amount of visitors (like 5K-6K per day) you can monetize it with advertisement networks like Adsense or Media.net

Good luck!

Can I become a blogger when I am in 11 standard?

Mehul Mohan, let myHome = () => location.href = '//codedamn.com';
Answered Sep 21, 2015

I'm in 11th standard and I'm a blogger. So I think I can answer this.

I've a blog http://www.mypremiumtricks.com   and I started it 3 years back.

At that time, I didn't know anything much in this field. I tried to learn and apply things like SEO, promotion, etc. to my blog, even wrote some wonderful articles (I think) but didn't work out correctly.

I don't even earn a single dollar from my blog. But I still pay like 95$ + 13$ an year for hosting and domain. Why? Because I like it! I don't have like millions of readers, not even thousands, not even hundreds! Maybe just 5-7! But I know I can help those people in same way, which makes me feel better.

There's also a quote: *Even if you have 1 reader who is helped by your articles, your blog is a big success!*

So start a blog on whatever you like! But make sure NEVER to compromise with your classes. Because these 2 years are the years I consider I can learn maximum. So don't miss this opportunity of learning!

I'm not talking about performance issues or security issues here. That depends on the code you write. I'm talking about functionality of the software.

Well that would be tough to say because C++ is build to interact directly to hardware as well of your computer.

Java, on the other hand is build to work with **JVM** under it which does all the things. So *virtually*, you can do *any* possible task you do in Java, with C++ as well. However, there are some tasks which you can do in C++ but not in Java!

Suppose I create an Object `obj` in JavaScript and call var new_obj = Object.create(obj); and then assign obj.__proto__ = new_obj; shouldn't the future look-ups for a non existent attribute get stuck in a cycle?

Mehul Mohan, Web developer
Answered Apr 6, 2015

Yeah exactly. You are correct! This would be kind of cyclic proto value which would be thrown as error in modern javascript interpreters in browsers as:

Uncaught Error: Cyclic __proto__ value

Why are there so many comments in JavaScript/jQuery libraries?

Mehul Mohan, Little did I know I know
Answered Apr 6, 2015

To help developers like you to understand what is happening at each line without actually reading and understanding the code (which takes some time!)

For your information, I'm creating Javascript (and jQuery) tutorials on youtube. So check them out and lemme know if they helped!

Why aren't the checkbox and radio allowed to be styled in HTML5?

Mehul Mohan, HTML5 developer
Answered Apr 6, 2015

Who said they can't be? Though radio buttons and checkboxes can't be completely modified, but we have great alternatives to work with them!

For your information, I'm creating HTML and CSS tutorials on youtube. So check them out and lemme know if they helped!

CSS?

Mehul Mohan, Web developer
Answered Apr 6, 2015

To do that, you'll need to know HTML and CSS. You'll need to get facebook logo and their CSS styles. You can even make it without actually copying anything from their site except logo of facebook. And with that, and with some HTML and CSS skills, you can create exactly same facebook login page.

For your information, I'm creating HTML and CSS tutorials on youtube. So check them out and lemme know if they helped!

Is lynda.com an awesome website to learn programming, especially PHP?

Mehul Mohan, Little did I know I know
Answered Feb 25, 2015

You should be awesome enough to learn a language. You won't believe but I've NEVER ever enrolled in such a paid course. My partners were:
- Google
- Stackoverflow

Can someone who was very bad at math and science in school become very good at web programming?

Mehul Mohan, Little did I know I know
Answered Feb 25, 2015

You don't need maths for web designing, seriously. You don't either need maths for web development, till a certain level. You go deeper and deeper, and you'll find maths everywhere. Trust me, if you have maths, you can go in any field. Don't hate it, its the one that took us from stone age to IT age.

Are there any good tutorials for creating a login and registration system using PHP?

Mehul Mohan, Web developer
Answered Feb 20, 2015

You can combine your sources of knowledge to build a form yourself. A good PHP login form requires these main things (not talking about HTML design):

- Proper field names (to receive user data at backend)
- Parsing user data (validating)
- Proper error messages for user
- Proper authentication

You can create a function accepting data and then truncate every possible attempt to attack the script using htmlentities and other functions in the langauge. Use a database like mysql to store your user's ID and password. And the best way would be to store it as a hash with a salt so even if your site's database is compromised, the attacker is unable to compromise your user's data (well, that being like credit cards, passwords, etc.)

Why does Fiverr allow bait and switch?

Mehul Mohan, let myHome = () => location.href = '//codedamn.com';
Answered Feb 13, 2015

It is not illegal. You will get any service in 5$. The only difference is that when a
fiverr asks you for more funds, he is extending the service scope to your project.
For example, creating your website responsive for 5$ is nowhere to be done. But I
offer it on my account because I do convert pages to responsive for 5$ which are
simple enough. For websites, my price is high.

So that isn't illegal. However if a seller rejects to do work after agreement, you can
contact fiverr sales.

In which language is the Android OS written?

Mehul Mohan, Android is super duper!
Answered Feb 12, 2015

Everything starts from C++ for the basics. Android is written in Linux kernel
which is eventually made in C and C++. However, most of its UI is written in Java
which is further (java) is written in C and C++.

:)

Can there be a transparent medium having an infinite refractive index?

Mehul Mohan, Science is reality.
Updated Jul 4, 2016

Refractive index is the number which when you divide with the speed of light in vacuum, you get the speed of light in that particular medium. If the refractive index is infinite, the speed of light is 0 in that medium, so photons literally just stay there. So, it is either not transparent or doesn't exist.
